

**ELECTRONIC PORTFOLIO OF
INTERNATIONAL CREDENTIALS**

For the World's Physicians... A Powerful and Innovative Career Development Tool

The Educational Commission for Foreign Medical Graduates (ECFMG®) is excited to tell you about the Electronic Portfolio of International Credentials (EPICSM). EPIC is a powerful tool for those pursuing careers in medicine.

With EPIC you can:

- Build a secure, web-based portfolio for the credentials related to your medical education, training, and licensure
- Have your credentials primary-source verified by ECFMG
- Request copies of your credentials, and reports verifying their authenticity, for organizations around the world

Your Portfolio—Ready Where and When You Need It

Looking for a job, volunteering, relocating? Throughout your career in medicine, your qualifications will be evaluated again and again. A critical part of establishing your qualifications is demonstrating that your medical credentials—medical diploma, transcripts, postgraduate training credentials, and certificates of medical registration/licensure—are authentic.

With EPIC, you'll be ready to respond. EPIC enables you to have your credentials primary-source verified by ECFMG in advance, so they'll be ready when you need them. Pursuing different career options, perhaps in different locations? With EPIC, you can request copies of your credentials, and reports verifying their authenticity, for organizations worldwide. And since EPIC is a web-based service, you can access your account, upload credentials, and request reports electronically, at your convenience.

As a medical student, graduate, or trainee, your EPIC Portfolio will grow with your career. By establishing your portfolio now and adding credentials as you receive them, you'll help to ensure that your credentials and proof of their authenticity will be ready to send, at the push of a button, as you identify important career opportunities.

Your Credentials—Backed by ECFMG's World-class Reputation

ECFMG is a world expert in primary-source verification of physician credentials. ECFMG's process, which includes verifying the authenticity of a document directly with the institution that issued it, is recognized and respected around the world. When you use EPIC, you provide medical regulatory authorities (MRAs), medical education and training programs, hospitals, and other entities with assurance that your credentials are authentic.

ECFMG's expertise in the primary-source verification of physician credentials has long been available to organizations through its Certification program and the ECFMG International Credentials Services (EICS). For the first time, EPIC makes this service available to individual physicians in a way that is both convenient and affordable.

For more information on EPIC, visit www.ecfmgepic.org.
